// PROFILE

Product manager with 5+ years of experience turning complex, ambiguous needs into products people actually want to use — and recently moving into AI product development, using AI tools to build working prototypes. I've led multiple features from 0 to 1, including a category-leading product with 1M+ monthly active users (financial-information / stock-market apps). With a front-end engineering background and finance training, I bridge business, technology, and users and make pragmatic trade-offs.

// EXPERIENCE

Product Manager — Mitake Information

Jul 2020 – Apr 2026

- Led **0→1** development of multiple features for a brokerage-grade stock app holding **90%+** of Taiwan's broker mobile-trading market with **1M+** MAU; surfaced needs and owned the roadmap.
- Integrated user feedback, business logic, and technical feasibility to ship on schedule; reworked UI/UX flows to cut support tickets and friction.
- Analysed competitors and market trends to surface and drive product improvements.

Key projects

- Member Center** — helped define a unified cross-platform architecture (DR, data sync) and contributed to security planning.
- Technical Charts** — led iteration for smoother UX and improved support docs; **support queries down 50%**.
- Real-time US Stocks** — consolidated three brokerage clients' requests via a templated design for scalability; partnered with the backend PM on business logic.
- New Search** — improved speed & accuracy with engineering, added trending search, and assessed load risk.
- Futures Exchange Regulation** — coordinated a 6-month compliance project across ~10 units / ~16 people (incl. regulator & vendors) without formal authority.
- After-Hours US Data & Ratings** — evaluated & integrated external data sources for fundamentals & analyst ratings; drove brokerage adoption.

Front-End Engineer — citiesocial

Apr 2019 – Dec 2019

- Built and maintained a Shopify e-commerce platform; optimised front-end performance and shipped new features and campaign pages.

Front-End Engineer — iDott

Apr 2018 – Sep 2018

- Independently designed the UI/UX, built the database and website, and delivered SEO, launch, and maintenance for a government project.

// SIDE PROJECTS

Universal Travel Helper Concept

0→1 market research for AI travel planning: competitive analysis, an MRD, and two personas; defined the USP and goals, and converged into an executable MVP.

Ticket & Pass Comparison In development

Picked the MVP via a CRISPE evaluation, authored the PRD / UJM / specs, and used AI tools with the Google Gemini API (grounding) to build a drag-and-drop planner with a real-time comparison engine; trilingual.
